

**PROFESSIONAL
CERTIFICATE**

**APPLIED AI
& MACHINE
LEARNING**

OVERVIEW

Artificial intelligence (AI) is changing how work gets done, how value is created and how professionals are judged. In India, employers are moving toward skills-first hiring and placing greater weight on practical capability, not simply formal credentials. At the same time, employers are signalling that technical familiarity alone is not enough. They increasingly want critical thinking, communication, adaptability and the ability to work effectively with AI in real business settings.

Epsilon Executive Education was built precisely for that shift. Named for the difference between what is expected and what is actually achieved, Epsilon is a live executive school for decision-makers in the AI era. It is designed for working professionals who do not need more content, but rather stronger judgement, sharper evidence discipline and greater confidence translating technical possibility into credible business action.

TURNING
TECHNICAL
FLUENCY INTO
STRATEGIC VALUE.

The Professional Certificate in Applied AI and Machine Learning is designed to build that difference by helping working professionals to...

- * **Analyse data more critically,**
- * **Question AI outputs more confidently,**
- * **Make better evidence-based decisions, and**
- * **Translate technical work into clear executive action.**

WHO IS THE PROGRAM FOR?

The Professional Certificate in Applied AI and Machine Learning is designed for working professionals.

This program is especially suited to:

ASSOCIATE PRODUCT MANAGERS & JUNIOR PRODUCT PROFESSIONALS who want to grow into roles with more ownership.

MARKETING, SALES & GROWTH PROFESSIONALS who want to use AI, automation and analytics more effectively.

BUSINESS ANALYSTS & OPERATIONS PROFESSIONALS who want to move into higher-value operational and process roles.

RESEARCH ASSOCIATES & FINANCIAL ANALYSTS who want stronger evidence-based reasoning and more strategic business involvement.

DATA ANALYSTS, REPORTING ANALYSTS & BI ANALYSTS who want to move beyond reporting into roles with stronger business judgement and applied AI use.

TEAM LEADS & SENIOR INDIVIDUAL CONTRIBUTORS who are moving into broader managerial responsibility.

The strongest fit is usually professionals with **5 to 15 years of experience**, especially those who are eager to be promoted, work across functions, engage with data or technical teams, or are expected to influence decisions beyond their formal title.

THE PROGRAM

The Professional Certificate in Applied AI and Machine Learning is a 12-week live program for working professionals who need the skills to build serious, work-ready capability.

Over the program, participants learn how to analyse data with more rigour, understand how AI and machine learning systems perform in real business settings, and question outputs with greater confidence. They also learn how to work with prompts, model selection, agents and automation in ways that are practical and usable at work, as well as be able to communicate technicality with more authority.

The program is **live**, graded and professionally grounded throughout. Participants complete assessed assignments, receive expert feedback and produce practical outputs.

By the end, participants leave with stronger analytical judgement, more practical AI fluency, greater confidence across business and technical contexts, and a body of work that shows clear professional advancement.

DURATION:

12 weeks (3 classes a week)

FORMAT:

Live online, cohort-based

SESSION MODEL:

Executive-friendly evening schedule, with structured live classes, guided reviews and feedback checkpoints

ASSESSMENT STYLE:

Graded submissions, live review and final capstone defence

FINAL OUTPUT:

Executive Decision Dossier, supported by milestone artefacts developed across the program

CREDENTIAL:

Certificate of Completion plus transcript-style performance scorecard

PROGRAMME FEE:

₹89,000

LEARNING EXPERIENCE:

High-touch, feedback-driven, professionally serious

THE EPSILON EXPERIENCE

LIVE LEARNING

Learn through live sessions, guided discussion and direct faculty interaction.

PEER ENVIRONMENT

Learn alongside working professionals from different functions and industries.

APPLIED LEARNING

Build practical skill in data science, AI use, workflow design and business decision-making.

CAPSTONE EXPERIENCE

Finish with the Executive Decision Dossier, a live-reviewed capstone built around evidence, AI supervision and business action.

APPLIED OUTPUT

Complete work product such as a Model Interpretation Memo, AI System Specification, Deployed Workflow Prototype with Operating Note, and Executive Proof Pack.

WHAT THIS EXPERIENCE BUILDS

Leave with stronger judgement, better AI fluency and work that shows real professional growth.

EXPERT FEEDBACK

Receive graded feedback throughout the program to improve the quality of your work.

PROGRAM MODULES

The 12-Week Strategic Architect Roadmap:

MODULE 1

The Analytical Engine — Data, Prediction & Causality

(Weeks 1–4)

- * Build a practical foundation in data science, statistical coding and data manipulation.
- * Understand how machine learning models learn, and how to interpret their outputs.
- * Move beyond correlation and think more clearly about causality, testing and business impact.

Week 1

**Data Science
Foundations**

Week 2

**Coding for
Analysis**

Week 3

**Machine
Learning
Frameworks**

Week 4

**Causal
Inference and
Strategy**

Milestone: Produce a Model Interpretation Memo based on a real dataset and a business-facing recommendation.

MODULE 2

The AI Practitioner — Prompting, Context and Economics

(Weeks 5–6)

- * Learn how prompts, retrieved information, tool use and system instructions shape AI output.
- * Understand how to choose models based on cost, speed, accuracy and business need.
- * Build evaluation criteria and simple test sets to assess output quality.

Week 5

**Prompt
Engineering
+ Context
Design**

Week 6

**Systems
Economics
+ Evaluation
Design**

Milestone: Produce an AI System Specification covering model choice, context strategy, evaluation and governance.

MODULE 3

Advanced AI Operations — Workflow Design, Supervision and Deployment

(Weeks 7-10)

- * Map how information moves across systems and workflows.
- * Learn how custom agents are structured and how they use tools and knowledge.
- * Use AI as a co-developer to build practical business applications and automations.
- * Think through deployment, handoff, monitoring and performance in real operating environments.

Week 7

**Systems
Thinking and
Visual Logic**

Week 8

**Custom Agent
Development**

Week 9

**AI-Augmented
Building**

Week 10

**Deployment,
Handoff and
Monitoring**

Milestone: Produce an AI System Specification covering model choice, context strategy, evaluation and governance.

MODULE 4

The Strategic Voice — Leadership, Authority and Defence

(Weeks 11-12)

- * Learn how to explain technical work clearly in business language.
- * Strengthen your ability to defend assumptions, methods and recommendations.
- * Build a professional proof pack from the work completed across the program.

Week 11

**Technical
Storytelling
+ Executive
Communication**

Week 12

**Executive Proof
Pack
+ Live Defence**

Milestone: Complete the Executive Decision Dossier and present it in a live capstone review.

Future Job Roles

- **Product Manager**
- **Sales, Growth or Marketing Manager**
- **Revenue Operations Manager**
- **Finance or FP&A Manager**
- **Director of Analytics or Data Science**
- **AI Support Technician**

PROGRAM FACULTY

Kent Oliver Bhupathi

Founder and Instructor,
Epsilon Executive Education

Co-Founder and Chief Economist,
Market Theory AI
ex-Interpublic Group, ex-Publicis
Group, ex-Horizon Media
Former Adjunct Faculty, NYU, Columbia
University and ISPP

Kent Bhupathi is an economist, data science leader and educator with more than 15 years of experience leading applied research and analytics work across marketing sciences, healthcare analytics, supply chain, business intelligence, litigation and professional services. He has worked at the intersection of economics, statistics, machine learning and decision support, helping organisations turn complex analysis into practical business action and return on investment (ROI).

He holds a dual degree in Economics and Architecture from the University of Texas at Austin and a Master's in Applied Econometrics from New York University. Across his teaching career, he has led curriculum design and lectured on applied statistics, data science, machine learning, quantitative business methods, data visualisation and technical communication. His prior teaching appointments include New York University (NYU), Columbia University and the Indian School of Public Policy (ISPP).

At Epsilon, Kent leads the academic design and teaching of the program with a strong focus on practical rigour. His approach is built around helping working professionals read data more critically, question AI outputs more confidently, and turn technical work into stronger business judgement, clearer communication and more credible decision-making.

GUEST LECTURERS

Jayprakash Mistry

Founder, Remarkables Capital and UnnickedHQ

Jayprakash Mistry has over a decade of experience across venture capital, private equity, credit and healthcare-focused investment management. Operating across the US, UK and India, he works at the intersection of capital, technology and global systems, with a focus on AI, deeptech, life sciences, fintech and defense-adjacent sectors. His work spans capital strategy, cross-border expansion and long-term value creation, informed by exposure to national security and technology ecosystems. That perspective led to Svatantra, which structures public but fragmented government capital signals that often precede major sector shifts. Jay also founded Remarkables Capital and is building UnnickedHQ, where he writes and speaks on deals, technology trends and unnicked thinking. He studied medical nanotechnology at Oxford, with additional training in finance, law and technology.

Philip Wiseman, J.D.

Vice President of Legal Affairs & Assistant General Counsel, JPMorganChase

Philip Wiseman is a business attorney with experience across banking, private equity, fund formation, securities regulation and cross-border transactions. At JPMorganChase, he advises on securities, corporate and regulatory legal matters tied to investment activity across the Americas, Europe and Asia. Earlier in his career, he worked at Winston & Strawn, Simpson Thacher and Bracewell, where he advised clients on fundraising, compliance, M&A and international investment structures. He earned his J.D. from the University of California, Berkeley School of Law and his B.A. from the University of Texas at Austin.

Alena Savera

Vice President of Development, The NRP Group

Alena Savera is a real estate development leader based in Dallas-Fort Worth. At The NRP Group, she leads multifamily land acquisition and development across market-rate and PFC projects in the DFW region. Since joining the firm in 2020, she has helped originate multiple projects totaling more than 2,350 units and has led work through entitlement and zoning processes. Before NRP, she worked at Perkins&Will and StreetLights Residential, where she supported planning and feasibility work across large multifamily projects. She holds a Bachelor of Architecture from the University of Texas at Austin.

Mardoqueo Arteaga, Ph.D.

Marketing Science Strategist, LinkedIn

Mardoqueo Arteaga is an economist working at the intersection of marketing science, technology and applied research. At LinkedIn Marketing Solutions, he builds frameworks to measure B2B advertising effectiveness and develops research on the broader B2B economy. Before LinkedIn, he worked at KPMG on economic consulting and at the Central Bank of Chile on macro-financial forecasting and monetary policy research. He holds a Ph.D. in Economics from Fordham University, with specialisation in information economics, monetary economics and econometrics. His work brings a strong perspective on causal inference, measurement and business decision-making.

” Testimonials

“I started my program wanting to understand machine learning without getting lost in theory for its own sake. Essentially, I needed the concepts to be immediately practical. Thanks to [Prof. Bhupathi] I could connect the stats to forecasting and campaign performance at work and make quicker decisions.”

Priyam C., Senior Marketing & Sales Analyst

“Before this, I understood AI mostly across a few features. Kent helped me understand what was actually happening underneath the models, what the outputs meant, and where the limits and biases were. That really changed how I now make product decisions. I’m much more careful now about what data can support.”

Sanjay J., Product Technical Manager

“I have used data software for years, but this was great to help me understand the reasoning behind the methods. I had some experience with statistics and Python code but applied examples made more sense. I’m now more confident explaining “the why” of analysis, and how to communicate technical material to my bosses.”

Jeremy H., Financial Planning & Analysis Manager

“Taking classes with Professor Bhupathi was something I looked forward to during my work week. It was an engaging experience that taught me skills I will take into every aspect of my life. He is also very approachable and answered all the questions patiently everytime. I highly recommend his AI course!”

Akriti J., Senior Data Scientist

CAPSTONE

The capstone is where participants bring the full program together. It is designed to show that they can do more than understand AI tools. They must use data, machine learning and applied AI to frame a real business problem, evaluate evidence, design a practical solution and explain it clearly to decision-makers.

For the capstone, participants will develop an Executive Decision Dossier around a business problem or workflow that could benefit from better analysis, automation or AI-enabled decision support. The project combines the

major skills built across the program: data interpretation, model thinking, prompt and context design, workflow deployment, governance and executive communication.

By the end of the capstone, participants will have a practical piece of work that demonstrates stronger analytical judgement, applied AI capability and the ability to translate technical work into clear business action. This final project becomes part of their Executive Proof Pack, giving them a credible output to show how they think, build and decide in an AI-enabled workplace.

* Tools and Resources

& more...

* Weekly Program Planner

Across the 12 weeks, participants should expect to dedicate a approx. 15–20 hours per week to the program.

CERTIFICATE

Upon successful completion of the program, participants will receive a Certificate of Completion from Epsilon Executive Education for the Professional Certificate in Applied AI and Machine Learning.

Participants will receive both a:

- **Verified digital certificate** issued in the registered name used for the programme.
- **Physical certificate** delivered by mail after successful completion.

The certificate recognises completion of a live, assessed program built around applied AI, machine learning, decision-making and executive communication.

Please note: To earn the certificate, participants must complete the required, graded assignments, successfully complete the capstone and achieve a grade of 80% or higher. Participants must also pass each module of the program.

WHAT EXACTLY IS EPSILON?

Epsilon Executive Education is named for the difference between what is expected and what is actually achieved.

In professional life, that difference is often where real value is created. Qualifications and technical knowledge matter, but real professional value comes from judgment, adaptability, discipline and the ability to turn complex tools into credible business outcomes.

Epsilon is a premium, synchronous school built around live teaching, expert critique and work that makes progress visible. It is designed for professionals who want and need more than just pre-recorded access to content or a marketplace of courses. Students here develop the ability to analyse data more critically, question AI outputs with confidence, make stronger evidence-based decisions and communicate recommendations with executive clarity. Epsilon is, and always will be, all about decision intelligence.
